| Course Objectives              | The objective of this course is to provide a calculus-based physics course to help<br>students pursuing advanced studies in engineering develop conceptual<br>understanding of physical principles, the ability to reason, and gain skills for<br>problem solving                                                                                                                                                                                                                                             |
| Course Content                 | Electric Charge; Coulomb's law, Electric field; Gauss' law, Electric Potential;<br>Capacitance, Dielectrics, and Electric Energy Storage; Electric Currents and<br>Resistance; EMF, Terminal Voltage, DC Circuits, and Kirchhoff's Rules; Magnetism<br>and Magnetic Fields; Sources of Magnetic Field, Ampere's Law, Biot-Savart Law;<br>Electromagnetic Induction, Faraday's Law, Lenz's Law; Inductance,<br>Electromagnetic Oscillations, and AC Circuits; Maxwell's Equations and<br>Electromagnetic Waves |
| Course Method/<br>Techniques   | Lecture $\boxtimes$ Question & Answer $\boxtimes$ Presentation $\square$ Discussion $\boxtimes$                                                                                                                                                                                                                                                                                                                                                                                                               |
| Prerequisites/<br>Corequisites |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| L1                       | Demonstrate a conceptual understanding of the fundamental physical laws of electricity and magnetism |  |  |

## FACULTY OF ENGINEERING COURSE SYLLABUS FORM

| Doküman No      | MF.FR.003  |
|-----------------|------------|
| Revizyon Tarihi | 13.11.2024 |
| Revizyon No     | 01         |
| Sayfa No        | 4 / 5      |

| L2 | Realize importance of physics and the scientific method for advancement of technology and human life.                                                   |
|----|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| L3 | Analyze problems using the laws of electromagnetism                                                                                                     |
| L4 | Gain knowledge and skills for modeling and solving variety of physics and engineering problems                                                          |
| L5 | Perform experiments, make measurements, analyze data and make calculations to reach meaningful results, present such activities as a scientific report. |

| Contribution of Course Learning Outcomes to Program Competencies/Outcomes |                                                                                                 |    |    |    |    |    |           |    |    |                  |            |  |   |    |     |       |

- i. Adequate knowledge in mathematics, science, and subjects specific to Computer Engineering; ability to use theoretical and applied knowledge in these areas to solve complex engineering problems.
- ii. Ability to identify, formulate, and solve complex engineering problems; ability to select and apply appropriate analysis and modeling methods for this purpose.
- iii. Ability to design a complex system, process, device, or product under realistic constraints and conditions to meet specific requirements; ability to apply modern design methods for this purpose.
- iv. Ability to develop, select, and use modern techniques and tools required for the analysis and solution of complex problems encountered in engineering practice; ability to use information technologies effectively.
- v. Ability to design and conduct experiments, collect data, analyze and interpret results in order to investigate complex engineering problems or research topics specific to the discipline of Computer Engineering.
- vi. Ability to work effectively in disciplinary and multidisciplinary teams; ability to work individually.
- vii. Ability to communicate effectively in oral and written Turkish; knowledge of at least one foreign language; ability to write effective reports and understand written reports, to prepare design and production reports, to make effective presentations, to give and receive clear and understandable instructions.

- viii. Awareness of the necessity of lifelong learning; the ability to access information, to follow developments in science and technology and to continuously renew oneself.
- ix. Acting in accordance with ethical principles, professional and ethical responsibility awareness; knowledge of standards used in engineering applications.
- x. Knowledge about business life practices such as project management, risk management, and change management; awareness of entrepreneurship, innovation; knowledge about sustainable development.
- xi. Knowledge about the effects of engineering applications on health, environment, and safety in universal and social aspects and the problems of the age reflected in the field of engineering; awareness of the legal implications of engineering solutions.
